Team Skyy
Cost-Divider App
Problem Report

1. Links/Buttons
• We wanted our webpage to look professional, so we added login buttons, along with links to meet team members that do not point anywhere but to an "under construction" page. Had we had enough time for 1 more sprint, a priority of ours would have been to complete these webpages.
• The "contact us" page, goes to an error page when submit is clicked.
• The upload button to upload the receipt allows you to select an image from your computer, but does not actually do anything with it.

2. Resizing Screen
• When screen is resized, it affects the location of some of the text in our webpage.

3. Different Browsers
• In firefox and chrome, the webpage is fully functional, however on internet explorer, none of the buttons work.

4. Load time
• Sometimes it takes the images on our webpage a little while to load and appear on the screen.

5. Empty slots
• On the final steps, if one of the Venmo username fields is left blank, the user is not prompted to re-submit but rather is redirected to Venmo anyways and the Venmo usernames who were properly submitted are charged. This wasn't really a problem but rather a design decision because we figured that if they wanted to leave a field blank it might not be an error, however it still worth mentioning in this report.

Note: The max number of users able to split a bill on our page is 25.
